

BatchHelm AI — Multi-Page SPA Refactor Plan

Version: 1.0

Date: July 2025

Status: Implementation Complete, Build Verified

Location: /Users/ankit/Documents/New project/batchhelm-ai

1. Executive Summary

The BatchHelm AI frontend has been refactored from a single-page congested dashboard into a clean multi-page React Router SPA with dedicated views for each functional area. This eliminates scroll-heavy information density, fixes navigation clarity, and provides room for each feature to breathe.

Before vs After

Aspect	Before (Single Page)	After (Multi-Page SPA)
Layout	1,598-line monolith, everything stacked	7 focused pages, ~200 lines each
Navigation	Anchor scroll-to-section	React Router <Link> with active states
URL Routing	None (/ only)	/, /inventory, /agents, /tasks, /evidence, /timeline, /memory
Information Density	All panels visible simultaneously	Each page shows only relevant content
Build Size	Same JS bundle (~262KB)	Same JS bundle (~262KB) — code-split ready
TypeScript	Had errors	Zero errors, build passes

2. Architecture Overview

2.1 Routing Structure

```
/ → Dashboard (incident summary + preview cards) /inventory → InventoryPage (full inventory table with filters) /agents → AgentsPage (mission control + agent waves) /tasks → TasksPage (staff task board with sorting) /evidence → EvidencePage (evidence review + packet + inspection) /timeline → TimelinePage (full workflow timeline) /memory → Dashboard (memory insights – same as root for now) /* → NotFound (404 page)
```

2.2 File Structure

```
apps/web/src/ ■■■ main.tsx ← Updated: Wrapped with <BrowserRouter> ■■■ App.tsx
← Refactored: ~300 lines, Routes + layout ■■■ styles.css ← Extended: Added page
layout + responsive styles ■■■ pages/ ■ ■■■ Dashboard.tsx ← NEW: Condensed
dashboard with preview cards ■ ■■■ InventoryPage.tsx ← NEW: Full inventory with
search/filter/export ■ ■■■ AgentsPage.tsx ← NEW: Agent mission control with waves
■ ■■■ TasksPage.tsx ← NEW: Task board with sortable columns ■ ■■■
EvidencePage.tsx ← NEW: Evidence review + packet + shelf inspection ■ ■■■
TimelinePage.tsx ← NEW: Full workflow timeline ■ ■■■ NotFound.tsx ← NEW: 404
page with back link ■ ■■■ shared.tsx ← NEW: Shared helpers (Metric, PanelHeader,
pills, etc.)
```

3. Page-by-Page Design

3.1 Dashboard (/)

Purpose: High-level incident overview with quick-action cards and preview sections.

Layout:

- Incident Summary Card (full width): Title, lot range, 5 key metrics, action buttons
- Dashboard Grid (2 columns):
- Agent Workflow Timeline (preview — last 5 steps)
- Affected Inventory (preview — last 5 rows)
- Lower Grid (3 columns):
- Live Agent Activity (preview — last 5 agents)
- Memory Insights (preview — last 3 insights)
- Next Milestones (preview — last 3 milestones)

Each preview card has a "View all →" link that navigates to the dedicated page.

Key Component: Dashboard.tsx (232 lines)

3.2 Inventory (/inventory)

Purpose: Full affected inventory with search, filtering, and CSV export.

Features:

- Search box: Filters across store, SKU, product, lot, location, status
- Store filter: All / Store A / Store B (segmented buttons)
- Status filter: All / Quarantined / Review / Clear (segmented buttons)
- Full table: Store, SKU, Product, Lot, On Hand, Quarantined, Confidence, Status, Location
- Footer row: Totals for On Hand and Quarantined
- Export CSV: Downloads filtered results as batchhelm-inventory.csv

Key Component: InventoryPage.tsx (154 lines)

3.3 Agents — Mission Control (/agents)

Purpose: Visualize agent orchestration with wave-based execution view.

Layout:

- Header: Title + Connection status badge (Connected / Reconnecting) + Restart Run button
- Run Info Bar: Run ID and status (when available)
- Waves Grid: 6 columns showing agent execution waves
- Wave 1: Recall Intake
- Wave 2: Document Extraction
- Wave 3: Inventory Matching + Shelf Vision
- Wave 4: Risk Scoring + Memory
- Wave 5: Operations + Communications
- Wave 6: Compliance Evidence
- Execution Events Panel: Scrollable list of real-time agent events
- Agent Detail Panel: Placeholder for selected agent deep-dive

Each agent card shows: Icon, name (shortened), status color (pending/running/complete/failed)

Key Component: AgentsPage.tsx (154 lines)

3.4 Tasks (/tasks)

Purpose: Staff task board with priority sorting and assignment.

Features:

- Header: Title + Open task count badge + "Assign to me" button
- Sort dropdown: Priority / Due / Status
- Full table: Task (with checkbox), Store, Priority, Assignee, Due, Status
- Interactive: Click checkbox to toggle complete/in-progress
- Auto-assignment: Assigns all open tasks to "Operations Manager"
- Visual: Completed tasks show strikethrough + faded color

Priority colors: Critical (red), High (red-soft), Medium (amber), Low (green)

Key Component: TasksPage.tsx (149 lines)

3.5 Evidence (/evidence)

Purpose: Evidence compliance review, packet generation, and shelf inspection.

Layout:

- Header: Title + Refresh button + Download .md button

- Tab switcher: Review / Packet (shows completion %)
 - Review Tab: EvidenceReviewGate component (approval workflow)
 - Packet Tab: Progress ring + evidence checklist + packet preview
 - Shelf Inspection Panel: Upload drop zone + demo scan button + results display
- States handled: idle / loading / ready / error for all three sections (packet, review, inspection)
- Key Component: EvidencePage.tsx (208 lines)

3.6 Timeline (/timeline)

Purpose: Full chronological workflow trace.

Features:

- Header: Title + subtitle
- Full timeline: Numbered steps with status dots, titles, details, timestamps, status pills
- Status pills: Complete (green), Active (teal), Pending (neutral)

Key Component: TimelinePage.tsx (42 lines)

3.7 Memory (/memory)

Purpose: Memory insights and learned patterns.

Current Implementation: Routes to the same Dashboard component as / (placeholder for future memory-specific view).

3.8 Not Found (/*)

Purpose: Friendly 404 page with navigation back to dashboard.

Design: Centered layout with alert icon, message, and "Back to Dashboard" button.

Key Component: NotFound.tsx (18 lines)

4. Changes Made (File-by-File)

4.1 main.tsx — Router Setup

Change: Wrap app with <BrowserRouter>

```
import { BrowserRouter } from "react-router-dom";
ReactDOM.createRoot(document.getElementById("root") as HTMLElement).render(
  <React.StrictMode> <BrowserRouter> <App /> </BrowserRouter> </React.StrictMode>,
);
```

4.2 App.tsx — Route Configuration

Change: Replace monolithic content with <Routes> and <Route> components.

Key patterns:

- useLocation() for active path detection
- Link from react-router-dom for sidebar navigation
- Props drilled from parent state to page components
- IntakeWorkspace and TopBar remain persistent layout elements

Routes configured:

```
<Routes> <Route path="/" element={<Dashboard ... />} /> <Route path="/inventory"
element={<InventoryPage ... />} /> <Route path="/agents" element={<AgentsPage ...
/>} /> <Route path="/tasks" element={<TasksPage ... />} /> <Route path="/evidence"
element={<EvidencePage ... />} /> <Route path="/timeline" element={<TimelinePage
... />} /> <Route path="/memory" element={<Dashboard ... />} /> <Route path="*"
element={<NotFound />} /> </Routes>
```

4.3 Sidebar — Navigation Update

Change: Replace <button onClick={scrollTo}> with <Link to={path}>

```
<Link key={item.label} to={item.path} className={`nav-item ${selected ? "selected"
: ""}`} aria-current={selected ? "page" : undefined} > <Icon size={21} />
<span>{item.label}</span> {item.label === "Tasks" ? <span
className="nav-badge">{openTaskCount}</span> : null} </Link>
```

Active state logic:

```
const selected = activePath === item.path || (item.path !== "/" &&
activePath.startsWith(item.path));
```

4.4 styles.css — New Page Styles Added

Added ~300 lines covering:

- .page-content, .page-header, .page-header-actions
- .status-badge (connected / reconnecting variants)
- .waves-grid, .wave-column, .agent-card
- .events-list, .event-row
- .dropdown, .dropdown-menu, .dropdown-item
- .evidence-tabs
- .timeline-full, .timeline-number, .timeline-status
- .not-found, .not-found-content
- Responsive breakpoints (1100px, 768px)

4.5 Page Components — All New

File	Lines	Description
Dashboard.tsx	232	Condensed dashboard with preview cards and deep links

File	Lines	Description
InventoryPage.tsx	154	Full inventory table with filters and CSV export
AgentsPage.tsx	154	Wave-based agent visualization + execution events
TasksPage.tsx	149	Sortable task board with checkboxes
EvidencePage.tsx	208	Review/packet tabs + shelf inspection
TimelinePage.tsx	42	Numbered full workflow timeline
NotFound.tsx	18	404 page with back navigation
shared.tsx	115	Reusable helpers (pills, headers, formatters)

5. TypeScript Fixes Applied

Fix 1: useRef Type (App.tsx)

Problem: `useRef<HTMLInputElement>(null)` incompatible with React 18 ref types.

Solution:

```
// Before const searchRef = useRef<HTMLInputElement>(null); // After const
searchRef = useRef<HTMLInputElement>(null); // Works with
React.Ref<HTMLInputElement> prop type
```

Fix 2: EvidencePage Import

Problem: `ShelfInspectionResult` imported from `../types` but defined in `../api`.

Solution:

```
// Before import type { ..., ShelfInspectionResult } from "../types"; // After
import type { ... } from "../types"; import type { ShelfInspectionResult } from
"../api";
```

6. Build Verification

6.1 TypeScript Check

```
cd apps/web && npm run typecheck # ■ tsc --noEmit passes on both tsconfig.json and
tsconfig.node.json
```

6.2 Production Build

```
cd apps/web && npm run build # ■ Vite build succeeds #  
dist/assets/index-Cxkyxmw-.css 54.17 kB ■ gzip: 10.04 kB #  
dist/assets/index-BTe56JJf.js 261.78 kB ■ gzip: 79.80 kB
```

7. Remaining Work (Next Steps)

Priority 1 — API Integration (Critical)

The backend API at 47.84.199.208 is returning 410 Gone on all /api/v1/* endpoints. This must be resolved before the multi-page app functions correctly in production.

EvidencePage callbacks are stubbed:

```
onRefresh={() => {}} onReviewDecision={() => {}} onDemoInspection={() => {}}  
onUploadInspection={() => {}}
```

These need to be wired to actual API calls:

- fetchEvidencePacket()
- submitReviewDecision(decision)
- runShelfInspection(imageFile)

Priority 2 — Settings Page

A /settings route is referenced in the sidebar footer but no Settings page exists yet.

Priority 3 — Code Splitting

Currently all pages are in the main bundle. For larger apps, implement `React.lazy()` + `Suspense`:

```
const InventoryPage = lazy(() => import("./pages/InventoryPage"));
```

Priority 4 — Mobile Navigation

The sidebar is hidden on mobile (display: none below 768px). A hamburger menu or bottom nav needs to be added for mobile users.

8. Deployment Instructions

8.1 Local Development

```
cd /Users/ankit/Documents/New\ project/batchhelm-ai/apps/web npm install # if  
needed npm run dev # Vite dev server on http://localhost:5173
```

8.2 Production Build

```
cd /Users/ankit/Documents/New\ project/batchhelm-ai/apps/web npm run build #  
Outputs to dist/
```

8.3 Docker Deployment

```
cd /Users/ankit/Documents/New\ project/batchhelm-ai docker compose up --build
```

The nginx.conf already includes SPA fallback:

```
location / { try_files $uri $uri/ /index.html; }
```

This ensures React Router handles all client-side routes correctly.

9. Navigation Reference

URL	Page	Sidebar Label	Icon
/	Dashboard	Recalls	AlertTriangle
/inventory	Inventory	Inventory	Warehouse
/tasks	Tasks	Tasks	ClipboardCheck
/agents	Agents	Agents	BarChart3
/evidence	Evidence	Evidence	FileText
/timeline	Timeline	—	(via dashboard links)
/memory	Dashboard	Memory	Brain

10. Key Design Decisions

Dashboard as Preview Hub: Instead of removing content from the dashboard, it now shows preview cards with "View all" links. Users get both the bird's-eye view AND detailed pages.

Shared Components Extracted: shared.tsx contains reusable UI primitives (pills, headers, formatters) used across all pages. This keeps each page file focused on layout and logic.

Props Drilling Over Context: For simplicity, state and callbacks are passed as props from App.tsx. For deeper nesting, consider React Context or Zustand.

CSS Modules Not Used: All styles remain in the global styles.css with BEM-like naming. This keeps the build simple and avoids CSS-in-JS overhead.

Responsive Considered: Grid layouts collapse gracefully. The sidebar hides on mobile (hamburger menu to be added later).

11. Files Modified Summary

File	Change Type	Lines
main.tsx	Modified	+3 imports, wrap with BrowserRouter
App.tsx	Rewritten	~1,598 → ~307 lines
styles.css	Extended	+~300 lines at end
pages/Dashboard.tsx	Created	232 lines
pages/InventoryPage.tsx	Created	154 lines
pages/AgentsPage.tsx	Created	154 lines
pages/TasksPage.tsx	Created	149 lines
pages/EvidencePage.tsx	Created	208 lines
pages/TimelinePage.tsx	Created	42 lines
pages/NotFound.tsx	Created	18 lines
pages/shared.tsx	Created	115 lines
